

Have I a puzzle for you!

Have I a puzzle for you! This binary code has a message in it. It has CRC error detection and encryption in it. I am using the perimeter or polynomial $X^{**3}+X^{**0}$ which is seed 1001b. After the CRC cipher is removed, it is coded with ASCII protocol - 8 bit. The hidden message contained is in English.

Let's see if you can find out what it is!

Here it is:

```
010011111000001010001000101001000110010001011101010001
000110000111100010100110001010100110000101001
```

Send your reply to: Robert@rt-manning.net

I will give \$10.00 for the first 3 participants to get it right. You must have a PayPal account to receive funds.
